I have a page with a list of Tabs (TabsService) which make AJAX requests to get their data. I have a TabsService reducer that updates the Store with the state of each tab on a change event. Currently, the state is correctly updated on page load but is never updated on click. What I am trying to do here is switch a route for a separate set of tabs once the page loads (or a previous route is routed to). After reviewing the docs I discovered that the easiest solution to a State change in NgRx is to call Store.dispatch with an action. However, I'm not sure how to have the Store dispatch an action once I have an observableArray of the responses. This is my TabsService reducer (I have removed unrelated code to keep it a bit shorter): import
